Jost, who was a writer on the long-running NBC show before he joined the cast this past season, wrote that he "voted for a different president" in the primaries, referring to the recent presidential election. But Obama has said, however, that he does talk to Trump occasionally. In an interview with the Harvard Law Record in 2014, Obama said that he had stayed in touch with Trump since he announced his bid for president last year. "The truth is, I spend a lot of time thinking about him and worrying about him," Obama told the Law Record. "I think he gets underestimated as a politician. Q: Difference between -f option and command line options I'm having a problem with this problem. I am following a tutorial for the command line, however, the man for command line seems a little bit more difficult to understand than the man for Linux. However, I get most of the problem solved. What is the difference between using -f and putting the option at the end of the command. For example, with ls -a -l -f I would think that the -f option takes priority over the command line. And with ls -a -l -f That I wouldn't have to use the option. A: With -f the ls command assumes the -f switch is on and that files named -f do not appear in the output. Without the switch, the -a and -l switches apply to the ls command, and they apply to the file names as well as directory names.
