I'm trying to delete a file on a network shared drive, but it just throws Access to the path is denied. The account I'm using has been given full control over the shared drive and the file to be deleted.

I can delete files from the shared drive using cmd and powershell, but not through the C# code. Any thoughts? A: You need to execute the access denied error with elevated privileges. You can use Process.Start() to launch CMD as the process you want to run. Then you can request appropriate access rights. This approach is in contrast to using AppDomains to request access rights when you're using a service to avoid accessing other users' resources. Modern lightning bolts shoot down from the clouds to the earth, bouncing off of the surface and striking the ground. Lightning strikes can also shoot straight into the clouds, leading to vertical bolts. Tails are the shorter, lower-voltage versions of these bolts. The Earth's Magnetosphere Electricity flows from one charged body to another. As it travels from the earth to the sun, the sun's magnetic field acts like a conveyor belt, pushing the electricity around the planet. As it travels from the sun to the earth, the magnetosphere acts as the conveyor belt again, pushing electricity around the globe. This is why lightning is always moving, and why some locations are more likely to have thunderstorms than others. Some areas around the world have more electricity available to them than others. Between regions of high and low electricity, the angle and amount of the sun's rays reflect off the atmosphere into the lower air. This creates more electricity and a thunderstorm. Geographic Divide Some low-voltage bolts of lightning travel miles away from the main bolt. These are called lateral or leader bolts. These bolts can strike at a greater distance at a different angle than main thunderbolts.
