MAC OS X 10.8 Mountain Lion Bootable USB For Intel PCs

---

I followed your instructions when booting from USB (10.8.3.raw+clover installed) but I get an error: this Mac OS X version is not supported on . Are there other ways to download? I really don't want to lose everything I've done, so I'd rather not download it again, but maybe there is a way to restore the bootloader (using md5sum for example). I have also seen that there is Xubuntu in the list of available OSes (via fingerprint), but it is not listed as Windows or Mac. Is there a way to install it on my computer I can't help you, I just got Xubuntu on my Mac. I think I got Xubuntu in a virtual machine.
